

# IPC MEDIA RECORDER

## ( Why IPC Voice Recording?)

IPC® has delivered high- and low-touch trading communications solutions to the global financial trading community including the top investment banks, hedge funds and investment managers in established and emerging markets. With 100-percent focus on this sector, nearly 40 years of expertise and an unrivaled record of innovation, IPC provides customers with unified solutions that support collaborative voice trading and real-time electronic trading and market data connectivity.

The introduction of IPC's Unigy®, the unified communications and applications platform, allows IPC to deliver on a long-standing customer demand to provide a voice recording platform that works synonymously with its trading solutions.

IPC's Media Recorder (IMR) was developed to provide the most complete, easy to manage and all-in-one voice recording platform for Unigy front office recording as well as PBX back office recording

## ( IPC Media Recorder (IMR))

The IPC Media Recorder, (IMR), delivers a next-gen IP voice recording solution that is SIP based and designed to meet all of the global regulatory challenges, as well as, meet the ever-changing requirements of IPC's worldwide customer base.

IMR was designed to provide the best resilience and security, easiest administration, and several advanced applications, as standard. IPC's goal was to ensure that all sites, regardless of size could benefit from the most sophisticated product features bundled together and delivered as part of the core platform feature, all at a price that is more cost-effective to anything else in the market today.

## ( Resiliency and "Lossless Recording")

IMR's architecture allows for TCR (Total Critical Resiliency) of both the call media and the call metadata meeting all of the various global compliance mandates. In addition, IMR offers a "lossless recording" option that will provide simultaneous recordings of all calls into separate recorders providing the most complete resiliency for mission-critical trader recordings

## ( Centralized Recording)

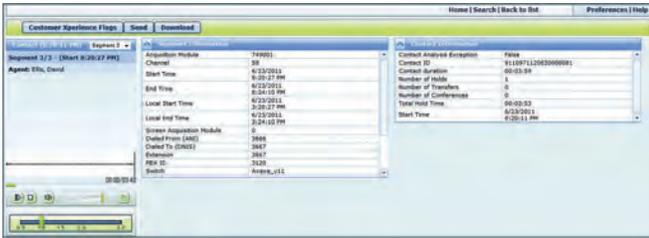

The IMR architecture was designed to perfectly complement IPC's Unigy platform and allow customers the most flexibility in deployment and management strategies. With the IPC Media Recorder, customers will be able to centralize their recording based on convenience or costs. Linking all branch sites into a single, enterprise-wide recording platform allows for centralized user administration and call playback.

Centralized search & replay, as well as, global archive management can be done across the entire voice recording platform through a standard Web browser. With IMR, your prime voice recording assets, the voice archives, can be managed by a single resource, anywhere across the entire network.

## ( Mixed Recording

IMR was designed to capture every possible voice recording channel in a cost-effective all-in-one solution. It supports the highest number of recording channels per server available in the market today. These channels can be "mixed" to record front office IPC, as well as PBX and IP PBX solutions, including Avaya and Cisco, all in the same system. This mixed recording capability ensures maximum business efficiency and assurance that all compliance recording is managed, secure and archived to one platform.

## ( Regulatory Compliance & Analytics

The IPC Media Recorder is designed to support the latest speech analytics and ensure advanced regulatory compliance. IMR's architecture allows you to easily bundle in the analytics capability either day one or later, based on changing business or regulatory requirement needs.

## ( Off-the-Shelf Hardware

Like Unigy, IMR is software-based, built on open standards and open architecture optimized for its appliances and was designed for standard off-the-shelf hardware. Unlike other solutions, customers can choose the best server to support their recording environment, based on cost, company hardware standards or deployment model.

## ( Global Archive Management & Control

The IPC Media Recorder gives you complete control over all of your recorded archives – for long term storage retention all the way through to deletion. IMR includes this capability as part of the standard package, as well as litigation hold,

which is a specialized feature that allows for archive extension for any recording that may need to be kept longer for legal or compliance investigations.

## ( IPC Service Advantage

IPC has long been recognized for its support strategy and its unparalleled service delivery for trading communications solutions to the global financial trading community in established and emerging markets. Compliance voice recording demands this level of dedication, support focus and attention to detail, not only to ensure compliance, but to offset any potential regulatory challenges that can arise quickly and from any global market. IPC leverages the largest global footprint of trading floor support engineers who not only understand the sophistication of the trading and voice recording platforms but also understand the intricacies related to the integration of those platforms with other customer solutions.

IPC will ensure that the IPC Media Recorder, IMR, meets your evolving compliance and regulatory needs without fail.
